## Official price at launch

When Apple announced the iPhone 17 Pro Max in September 2025, the official base price was declared. According to Apple’s Singapore store, the entry price for the iPhone 17 Pro Max starts at **S\$ 1,899**. This reflects the “unlocked” — SIM-free — version.

For the U.S. market, the baseline starting price is **US \$1,199**. That aligns with the information provided by major tech outlets shortly after the launch.

## Price by storage configuration

Unlike older models that sometimes started at 128 GB, the iPhone 17 Pro Max now begins with 256 GB as its base storage.

Here is a quick overview of how Apple priced different storage versions of the iPhone 17 Pro Max (U.S. MSRP):

Storage	Approx. Price (USD)
256 GB (base model)	\$1,199
512 GB	\$1,399
1 TB	\$1,599
Higher capacity (when offered — e.g. 2 TB) Up to \$1,999 (depending on region and availability)	

These pricing tiers were widely reported after the official announcement.

## Why the price increased compared with previous generation

One of the driving reasons behind the price structure of the iPhone 17 Pro Max is that Apple bumped the base storage to 256 GB, which historically was available only at higher price points.

Additionally, before the release, several analysts predicted a price increase across the entire 2025 iPhone lineup due to rising component costs and global supply pressures. That includes both the Pro and Pro Max models.

Still, while the smaller Pro model ( iPhone 17 Pro ) saw a clear price bump compared with its predecessor, iPhone 17 Pro Max kept the \$1,199 starting price consistent with its previous generation. In that sense, Apple appears to have tried balancing improved hardware with reasonable price stability at the high end.

### International pricing variations—what to consider

The price you pay for the iPhone 17 Pro Max often depends on where you buy it. Official pricing (like the S\$1,899 in Singapore) reflects local taxes, import duties, and currency differences.

If you buy the U.S. version and import it, remember that you may end up paying more after converters, taxes, and potential warranty limitations. Because of that, local MSRP from Apple in your country (or region) is often the safest benchmark.

### Deals, trade-ins and promotional offers

Shortly after the launch, some retailers and carriers began offering discounts or financing deals on the iPhone 17 Pro Max. For example, one U.S.-based mobile carrier offered a limited-time discount that brought the 256 GB model down to about US \$999.

This shows that if you're willing to buy with a contract or accept financing terms, it's possible to pay significantly less than the official MSRP. Still, for most buyers — especially those purchasing the phone outright — the advertised base prices remain the reference point.

### What price you should expect (in late 2025)

If you are getting a brand-new iPhone 17 Pro Max soon, here's a realistic expectation depending on where and how you buy:

- If you buy directly from an official Apple store (unlocked): expect ~US \$1,199 (256 GB) or ~S\$1,899 in Singapore.
- For higher storage (512 GB — 1 TB): expect higher prices, potentially around US \$1,399–\$1,599 or local equivalent.
- If you use carrier deals or trade-in offers: you might pay \$200–\$300 less, depending on discounts or financing plans.
- Imported/unofficial units: final cost may vary significantly due to shipping, tax, and warranty considerations — sometimes making overall cost comparable to local official price.

### Should you buy it now or wait for deals?

There are pros and cons both ways. Buying directly at MSRP ensures you get a fully supported, warranty-covered device without the complications of contracts or trade-in trade-offs. On the other hand, if you don't mind signing up with a carrier or trading in an older iPhone — waiting a few weeks could save you a noticeable amount.

Also, because storage starts at 256 GB now, you get more value right away compared with earlier base-storage phones. For many users shooting photos, recording video, or gaming, that extra storage can pay off quickly, making the base price more justifiable.

## Conclusion

The iPhone 17 Pro Max remains one of the most expensive mainstream smartphones on the market in 2025. Its official starting price — US \$1,199 (256 GB) or S\$1,899 in Singapore — reflects both premium hardware and the shift to larger base storage. While higher-capacity versions and certain regional differences push prices up further, there are also opportunities to save through trade-ins, carrier deals, or promotions.

If you want a powerful flagship that's designed to last several years — and value generous internal storage — the iPhone 17 Pro Max is positioned as a top-tier device. Whether you pay full price or hunt for a discount, now you know what to expect in late 2025.
