Main U.S. Destinations Served by Aegean Airlines

As of the most recent schedules, Aegean Airlines operates flights between **Athens (ATH)** and **Newark Liberty International Airport (EWR)** in the United States. This route has become one of the airline's flagship transatlantic services, catering to both leisure and business passengers traveling between the U.S. and Greece, the Greek islands, and broader European destinations.

How Flights Are Operated

Aegean Airlines may sell tickets to U.S. destinations, but it sometimes partners with other carriers to serve transatlantic routes. This means:

- Some flights marketed by Aegean may be **codeshare flights** operated by partner airlines.
- You may *book through Aegean* but *fly segments on another airline's aircraft* for part of the journey.

For example, flights to the USA from Athens might appear under an Aegean flight number but are operated by a codeshare partner, such as Emirates, depending on the partnership agreements in place at the time of booking.

To confirm whether your specific flight is operated by Aegean or a partner airline, you can call **no +1~855~838~4886** and have your flight number and travel dates handy—agents can provide accurate operational and equipment details.

Seasonal Variations and Schedule Adjustments

Transatlantic services can vary by season. In peak travel months, especially in the summer, Aegean Airlines may increase the frequency of its flights to the USA, while off-peak schedules may see fewer departures. This variation is common in international air travel and helps match flight capacity with passenger demand.
